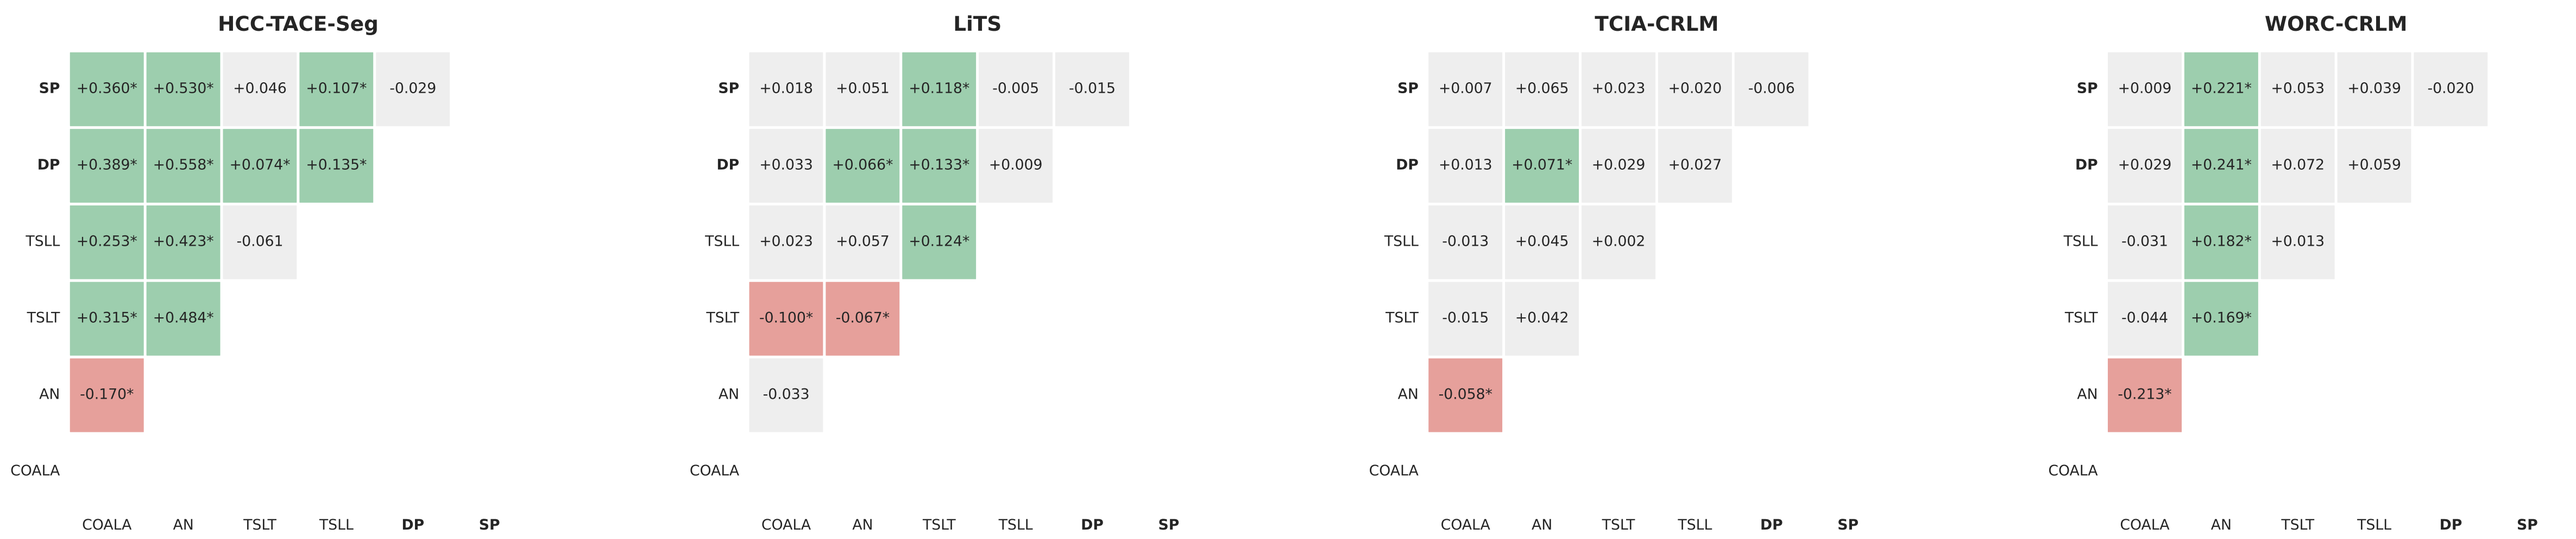
Detectability: model comparisons across datasets



Voxel level: Dice, Precision, Sensitivity. Lesion level: Detectability (IoU ≥ 0.20).
Values: mean paired differences (row model − column model).
* Holm-adjusted Wilcoxon $p < 0.05$ (15 pairs per dataset × metric), with significant Holm-adjusted Friedman test.
SP–DP: valid SP–DP pairs; other pairs: cases valid across all six models.
